WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

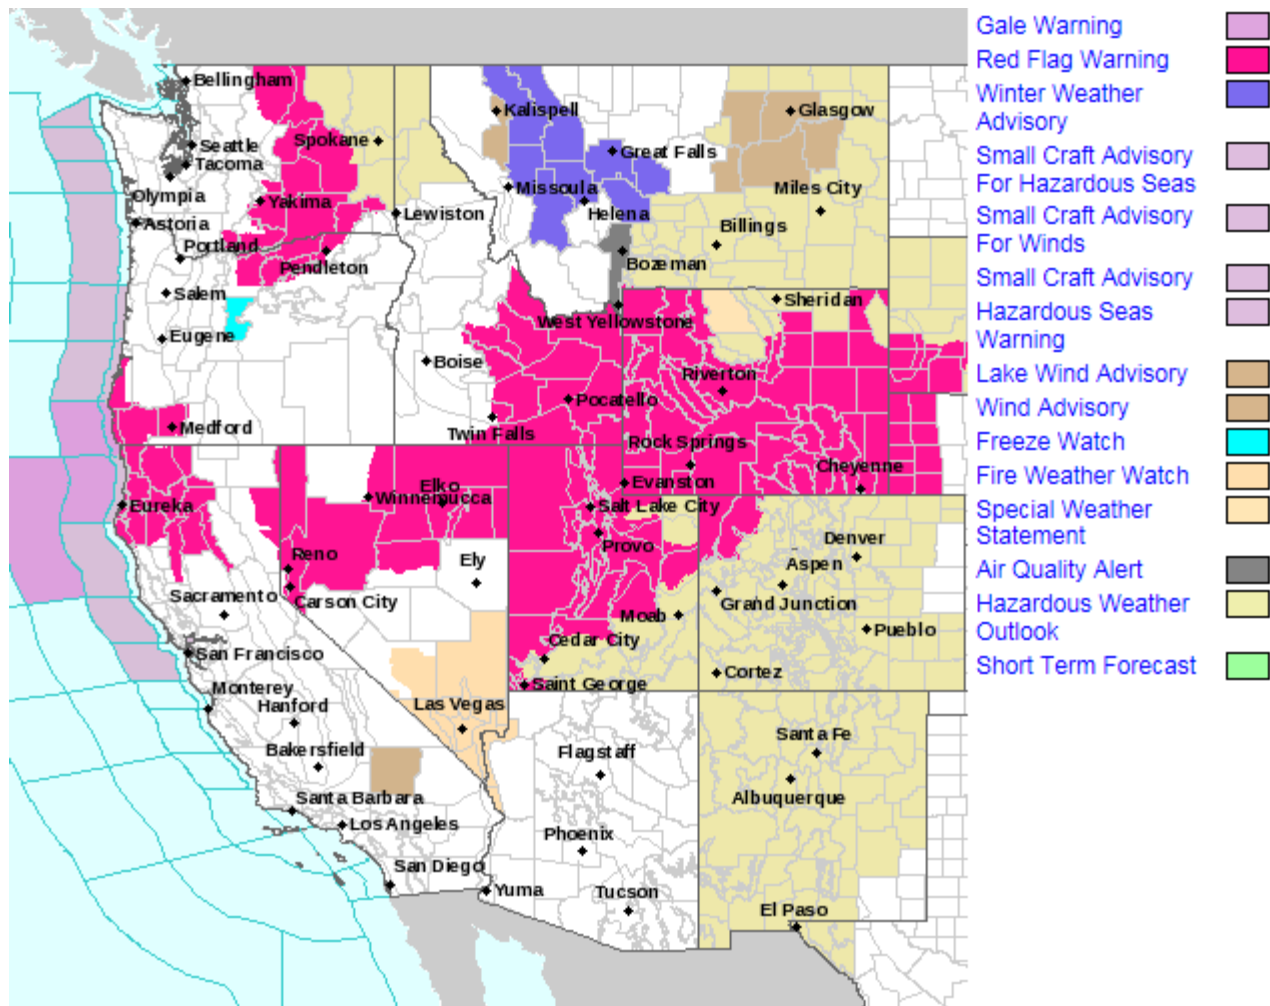

Gusty westerly winds with low RH this afternoon near and east of the Cascade/Sierra crest. Isolated showers and/or thunderstorms possible eastern areas Monday afternoon through Tuesday evening. Gusty N to NE winds Monday/Monday night northern areas . Moderately strong Delta breeze at time Today through Monday evening. A cooling trend will start today as low pressure trough moves over the Northern California region from the north over the next few days. Afternoon highs today can be as much as 10 degrees cooler than Saturday with the warmest inland areas in the lower 90s. Low afternoon relative humidity (RH) (8-15%) will continue for many areas, especially the eastern areas where some gusty westerly winds will develop near and east of the Cascade/Sierra crest. Gusts to around 30 mph should become fairly common there but could also be locally stronger for a few hours before the winds rapidly decrease this evening. A moderately strong Delta breeze will also develop. Cooler weather and a chance of isolated showers and late season mix of dry/moist thunderstorms near and east of the Cascade/Sierra crest will be in place Monday through Tuesday evening as the trough develops more over the region. Rather dry N to NE winds will develop across the northern areas Monday afternoon into the evening with gusts of 25-30 mph expected. The Delta breeze will continue overnight and become a bit stronger and more widespread Monday afternoon with gusts to around 35 mph possible there. Temperatures will cool off another 5-10 degrees over the next few days before starting to warm again Wednesday through the rest of the week. The warmest inland areas will be in the 80s Monday through Wed with the coolest day Tuesday. High pressure will take over the our weather pattern again starting Wednesday as the trough moves eastward. Dry, gusty N to NE winds are expected to return to the favored areas late this week. Afternoon high temperatures will return to quite a bit above normal inland as well.

SOUTHERN CALIFORNIA

Windy across the mountains and deserts this evening through Tuesday evening. A weak area of low pressure will move inland across Central California bringing isolated showers and thunderstorms to the Sierra this afternoon. This low will also cause temperatures to cool a few degrees today, with mid 70s to mid 80s across the mountains and mid 80s to mid 90s in the valleys. Minimum humidity will continue to be mainly between 12% and 25% away from the coastal areas today. A trough dropping south from Canada will form an area of low pressure on the border of Northern California and Nevada Monday and Tuesday which will bring strong south to west winds to wind prone mountain and desert areas this evening through Tuesday evening. Winds will be sustained 20 to 30 mph with gusts to 50 mph. Significant cooling will take place Monday and Tuesday, with temperatures 10 to 15 degrees below average by Tuesday. The marine layer will deepen to between 3,000 and 4,000 feet and drizzle will be likely from the coast to the coastal slopes Monday night and Tuesday morning. Minimum humidity will increase to 15% to 30% above and away from the marine layer Monday and Tuesday. Isolated showers and thunderstorms will be possible over Mono County Tuesday. A weak ridge of high pressure will build into California from the Pacific Ocean bringing a warming and drying trend to the region Wednesday through Saturday. Temperatures will be near to a little above average Friday and Saturday.
